

2016 and 2017 RATE APPLICATION
SIECA FOLLOW-UP QUESTIONS

SIECA Q3 SUPPLEMENTARY 2:

Please identify the source of the capital cost data used to determine the Equivalent Peaker Method ratio calculations shown in the "2014 Summary of Classification of SaskPower Generating Assets" chart included in SaskPower's response to SIECA Question #3.

Response:

The source of the capital cost data used to determine the peaker method ratio calculations shown in the "2014 Summary of Classification of SaskPower Generating Assets" chart included in SaskPower's response to SIECA Question #3 is from the following sources:

- Consultant studies commissioned by SaskPower for new generation;
- Proposals from independent power producer project proponents; and
- In the case of wind, the allocation was based on the historical performance of wind at peak demand times.

These costs are periodically updated to reflect escalation to current year dollars.
